

Auto-enrollment upon course completion

Ester Andersson - 2024-10-27 - Functions

Auto-enrollment upon course completion is a function that lets the system automatically enroll a learner in a new course when another course is completed.

1. Go to the course you want your learners to complete to be enrolled in another.
2. Under "Next course", click "Add next course". Choose the course your learners should be enrolled in.
3. Create an automated communication in the next course to let the system automatically send a welcome email to all registered participants (not mandatory).
4. Your learners now have access to the course!

The screenshot shows the Learnifier interface for a course titled "Introduction to Learnifier". The course is created by Demo Ester and is currently ongoing. The participants section shows 9 participants with a progress chart indicating 5 Not Started, 3 In Progress, and 1 Completed. The 'Next Course' section is highlighted with a green arrow, showing the 'Add Next Course' button. The interface also includes sections for Awards, Project Team, and Announcements.
