How do I add learners through API?

Ester Andersson - 2024-02-19 - [API, SAML, integrations and general settings](#)

To add learners via API, You will need the participant's email address, username, or API user id. Precisely as in the admin view, you need to add the participant to a course and then activate them.

POST /orgunits/{orgid}/projects/{projectid}/participants - Add participant
POST /orgunits/{orgid}/projects/{projectid}/participants/\${participantId}/activate -
Activate participant

The next step is to set up an automatic email in Learnifier, such as an invitation email that can be triggered when a participant is registered. Please see [How to get started with automated communication](#) or contact support@learnifier.com to learn more about automated communication. The full API documentation is available [here](#).
