Release notes: June - August 2025

2025-09-09 - Gabriella Eriksson - [Release notes](#)

In this release note, you'll find an overview of the latest features, improvements, and fixes. Our goal is to keep you informed about what's new and how these updates can help you get more out of the platform.

New

- **New Team View BETA**

The new Team View features a refreshed design, enhanced functionality, and clearer insights, providing managers with the right tools to track progress and support learning within their teams.

- **Translate with AI**

Our new AI-powered translation feature lets you generate translated versions of your courses automatically, quickly, and with consistent quality.

- **xAPI and CMI5 Support**

We now support the e-learning standards xAPI and CMI5. These modern alternatives to SCORM provide more detailed tracking, broader compatibility, and seamless integration with today's learning tools and environments.

Improvements & Changes

- **AI-Generated Quiz: Generate more questions**

You can now generate up to 30 quiz questions automatically from the text content in your courses.

- **Segment-Based Participant View in Events**

Participants are now only shown under the event that belongs to their assigned segment in the project's event tab. This makes it easier to track attendance and manage events by segment.

- **Automations: Calculate matching users**

A new button has been added to calculate the number of users who match your automation rules.

- **Reporting: Awards Report update**

Awards that have been replaced by a newer version will now be hidden in reports for clearer insights.

- **Reporting: Project Status Completion**

A new column, “**Expired**,” has been added to help you see which projects generate the most participants and where setting an expiration date might improve user activity management.

Fixes

- **Google Calendar Map Precision**

Location detection has been made smarter and more reliable, so you can pinpoint places on the map with greater accuracy.
